

Community Digital Initiatives Inventory

The existence of or discussion about potential Information Technology (IT) initiatives indicates some level of understanding about the importance of the diffusion and adoption of IT to the community's future. The more items that are checked the higher the likelihood that the community will engage in a connecting community's project. Individuals that are involved in these projects are likely candidates to serve on a Connecting Communities leadership team.

Are any of the following Information Technology (IT) related initiatives in progress or being discussed in the community?

Initiative	Check if yes	Who is involved?
Broadband Access <ul style="list-style-type: none"> • Expanding additional service by private providers • Expanding services via a public provider • Creation of public access points/computing centers 		
Community Website <ul style="list-style-type: none"> • Governmental • Civic/Nonprofit 		
eGovernment <ul style="list-style-type: none"> • Public entities have Web sites that enable residents to respond to surveys, pay bills, access services and register for events online. • Hospitals and clinics have secure web sites that allow patients and doctors to access medical records. • School Web sites enable parents and students to access student records, homework assignments and pay fees online
